DRILLING TOOLS
CRAZYDRILL COOL

CrazyDrill Cool

CRAZYDRILL Cool

HIGH PRECISION FOR DEEP HOLES UP TO 15 X D

Mikron Tool CrazyDrill Cool line offers a through coolant deep-hole drill program for a wide range of materials. The application range covered goes from hole diameters of 0.75 mm up to 6.00 mm and depth of cut up to 15 x d.

Depending on the material to be machined, the drills are available with or without wear protective coating.

Combining Mikron Tool CrazyDrill Pilot (or CrazyDrill Coolpilot e.g. CrazyDrill Pilot SST-Inox for difficult to machine materials) with CrazyDrill Cool allows for accuracy in deep drilling operations. Depending on the material to be machined, a pecking cycle for chip removal may be necessary. By means of fine-tuned tolerances between CrazyDrill Pilot and CrazyDrill Cool, accurate drilling and excellent hole quality are assured with precision alignment and no measurable diameter difference between tools.

The through coolant holes supply adequate and continuous coolant to the tip for constant cooling, lubrication and chip removal. The power chamber reduces pressure loss assureing higher flowrate when drilling even the smallest diameters. High drilling speed and good tool life are the result.

Page 297	Page 305	Page 313

1 | SHAFT
The robust solid carbide shaft guarantees a high degree of concentric accuracy and reliability.

2 | CARBIDE GRADE
The use of latest generation carbide grades allows highest machining speed and feed.

3 | COATING / SURFACE TREATMENT
- **Version CA (uncoated):** Extremely smooth flutes to limit chip jamming risk. Edge preparation provides consistent tool life. Optimal for aluminum, brass and bronze.
- **Version CS (coated):** The additional high-performance eXedur RI/RIP coating provides thermal and wear protection, guaranteeing a longer tool life. Optimal for steels, alloyed steels, cast iron.

4 | THROUGH COOLANT AND POWER CHAMBER
The through coolant holes supply adequate and continuous coolant to the tip for constant cooling, lubrication and chip removal. The power chamber reduces pressure loss and increases flowrate even when drilling smallest diameters.

5 | CUTTING GEOMETRY
The unique CrazyDrill S tip geometry together with the special designed flutes allows highest drilling performance, improves chip evacuation and limits the need for pecking (depending on work material).

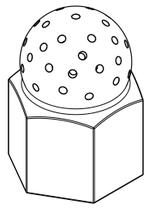
CRAZYDRILL COOL

Benefits and applications

THE SMALL DRILL WITH INTERNAL COOLING FOR DRILLING DEEP HOLES

- **SHORT MACHINING TIME** | due to high feed rates
- **LONG TOOL LIFE** | due to efficient coolant
- **HIGH DEGREE OF PRECISION** | due to small tolerances



COMPONENT
Spray nozzle

MATERIAL
X2CrMoTiS18-2 / 1.4523 / ASTM 430F

MACHINING
- 50 holes
- d = 1.0 mm
- Drilling depth 15 mm

DRILLING TOOL
Mikron Tool - CrazyDrill Cool - 15 x d - coated

DATA	MIKRON TOOL
Tool type	CrazyDrill Cool - Carbide - Coated - Internal cooling
Item number	2.CD.150100.CS
Cutting data	v_c = 50 m/min f = 0.03 mm/rev Q_1 = 0.5 mm Q_x = 0.25 mm

APPLICATION DOMAINS	COMPONENTS EXAMPLES
Dental	Dental implants
Medical technology	Component for measuring device

Tolerance	+ 0.004 mm 0	+ 0.006 mm + 0.001 mm

DRILLING WITH INTERNAL COOLING

Coated **Uncoated**

CrazyDrill Cool 10 x d is specially engineered for:

- **Coated version** (eXedur RI / RIP) - unalloyed, alloyed and stainless steels, cast iron and even for heat treated steels up to 55HRc.
- **Uncoated version** - non ferrous material

The through coolant holes supplies constant coolant flow to the tip. For small diameters, an additional power chamber in the shank assures a higher flowrate. Comparatively at same coolant pressure three time flowrate will be supplied to the cutting area. This technology enables high drilling speed with more effective chip removal. For coated version the high-performance eXedur RI / RIP coating provides thermal and wear protection, guaranteeing a longer tool life.

We recommend CrazyDrill Pilot or, for difficult to machine materials CrazyDrill Coolpilot / CrazyDrill Pilot SST-Inox, for hole preparation on flat and even surfaces. In case of inclined surfaces up to 60° we recommend CrazyDrill Crosspilot as pilot drill. Pilot drilling with CrazyDrill Pilot / CrazyDrill Coolpilot / CrazyDrill Pilot SST-Inox / CrazyDrill Crosspilot is the perfect start for an accurate (position and alignment accuracy) and consistent machining process guaranteed by carefully determined tool tolerances. For details see "drilling process".

Coolant type, pressure and filtration

Recommendations for coolant type, pressure and filtration are on page "drilling process".

Please note

You couldn't find your suitable version of the CrazyDrill Cool - coated / uncoated (diameter, length, cutting direction…)? Ask us about our customized versions!

Regrinding: This product can be reground starting from Ø 1.4 mm.

CRAZYDRILL Cool

DRILLING TOOLS
CRAZYDRILL COOL

Drilling process CrazyDrill Cool

ACCURATE AND RAPID DRILLING UP TO 15 X D

Coolant type, filtration and coolant pressure

Coolant type: For best results, Mikron Tool recommends the use of cutting oil as coolant fluid. Alternatively, emulsion of 8% or more with EP-Additives (Extreme-Pressure-Additives) can be used with good results as well.

Filtration: Good filter quality is very important when using through coolant drills. Dirt particles or residual chips can clog the coolant holes and consequently reduce dramatically the flowrate. The following filter qualities must be adhered especially in small diameters:

- Drill with Ø < 2 mm filter quality ≤ 0.010 mm.
- Drill with Ø < 3 mm filter quality ≤ 0.020 mm.
- Drill with Ø < 6 mm filter quality ≤ 0.050 mm.

Coolant pressure: To ensure a reliable drilling process the following minimal pressures are required (see chart). Higher pressures are needed for smaller drill size diameters. High pressure is generally better for the cooling and chip evacuation effectiveness.

Ø d, Tool [mm]	Minimal pressure [bar]
0.75	70
3.00	40
6.00	30

Tool holders

For detailed indications for tool holders see chapter "Technical information".

CrazyDrill Cool 6 x d

For drilling depth up to 6 x d we recommend pilot drilling or centering only on irregular, rough or inclined surface and if a high position accuracy is requested.

CrazyDrill Cool 10 x d / 15 x d

For these drilling depths Mikron Tool recommends pilot drilling for CrazyDrill Cool:

- **CrazyDrill Pilot** as pilot drill
- **CrazyDrill Crosspilot** as pilot drill for inclined surfaces
- **CrazyDrill Coolpilot** as pilot drill for difficult to machine materials
- **CrazyDrill Pilot SST-Inox** as pilot drill for difficult to machine materials

Pilot drilling and drilling

Pilot drilling with CrazyDrill Pilot is the perfect start for an accurate (position and alignment accuracy) and consistent machining process. Inclined surfaces requires the use of CrazyDrill Crosspilot.

The quality of drilling (position and alignment accuracy, no measurable transition from pilot hole to the following drilling steps) and a stable machining process are guaranteed by carefully determined tool tolerances.

CRAZYDRILL Cool

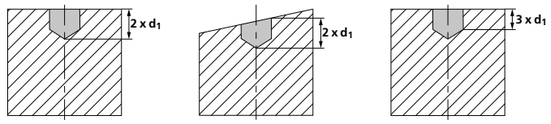
DRILLING TOOLS
CRAZYDRILL COOL

Drilling process CrazyDrill Cool

ONE STEP DRILLING (DEPENDING ON MATERIAL, SEE CUTTING DATA CHART)

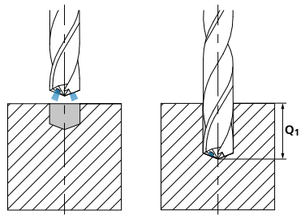
1 | PILOT DRILLING

- With CrazyDrill Pilot / CrazyDrill Coolpilot or CrazyDrill Pilot SST-Inox (straight surfaces) or CrazyDrill Crosspilot (inclined surfaces).



2 | DRILLING

- Turn on coolant of CrazyDrill Cool.
- Drilling with CrazyDrill Cool to full depth Q_1 in one step.



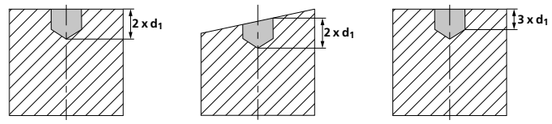
Note:
After the drill reached desired cutting depth, return at increased feed rate (or in case of perfect conditions rapid traverse) to safety position.

DRILLING AS PER DIN 66025 / PAL (DEPENDING ON MATERIAL, SEE CUTTING DATA CHART)

G83 deep-drilling cycle with chip break and chip removal (pecks)
Q = depth of the respective peck

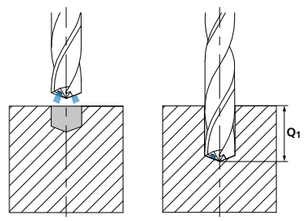
1 | PILOT DRILLING

- With CrazyDrill Pilot / CrazyDrill Coolpilot or CrazyDrill Pilot SST-Inox (straight surfaces) or CrazyDrill Crosspilot (inclined surfaces).

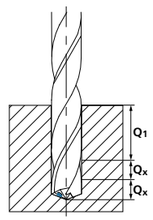


2 | DRILLING

- Turn on coolant of CrazyDrill Cool.
- Drilling with CrazyDrill Cool up to maximum drilling depth (Q_1) in one step, followed by peck to remove chips.



- Additional steps (Q_X) as per cutting data chart, followed by peck to remove chips.



Note:
Drill can be retracted completely from the hole between pecks. However if vibrations occur, we recommend that the drill tip never exits hole to prevent breakage. After the drill reached desired cutting depth, return at increased feed rate (or in case of perfect conditions rapid traverse) to safety position.
